

ZEOLITE CLINOPTILOLITE

APPLICATION AS

GRASS CONDITIONER

OPTIMIZED WATER AND FERTILIZER USAGE

Zeolite is a soil conditioner and fertilizer additive that acts as a reservoir for water and plant nutrients. They are characterized as high capillary porous structures and high cation exchange capacities.

Zeolite, thanks to its High Capillary Porous Structure;

- Increases water absorption and retention. Economizes water usage.
- Acts as a water reservoir in dry and sandy fields.
- Keeps beneficial microorganisms in the soil alive.
- Absorbs excess water, and thus prevents root decays and fungal diseases.
- Aerates the soil.

Zeolite, thanks to its High Cation Exchange Capacity;

- Holds and slowly releases ammonia, nitrogen, potassium and phosphorus.
- Transforms your regular fertilizer into a slow - and controlled - release fertilizer. Economizes fertilizer usage.
- Reduces fertilizer volatility and prevents loss of fertilizer due to leaching.
- Absorbs excess ammonia, and thus prevents root burns.
- Cultivates your plants & trees continuously in harmony.
- Cleans your soil from toxic materials and metals. Acts as a pesticide, fungicide, herbicide carrier.

High Economic Returns with A Low Cost

Zeolite yields high economic benefits with only a little expenditure.

If your soil is sandy or clayey, ATTENTION please!

Zeolite regenerates your sandy soil. It absorbs fertilizers and nutrients in the soil and prevents them from leaching with the irrigation water. After adsorbing fertilizers and nutrients, it enriches and moisturizes your sandy soil. Zeolite aerates your clayey soil. It prevents sludge formation. Enables the plant roots to access the fertilizers & nutrients easily. It stimulates the microorganismic activities in the soil.

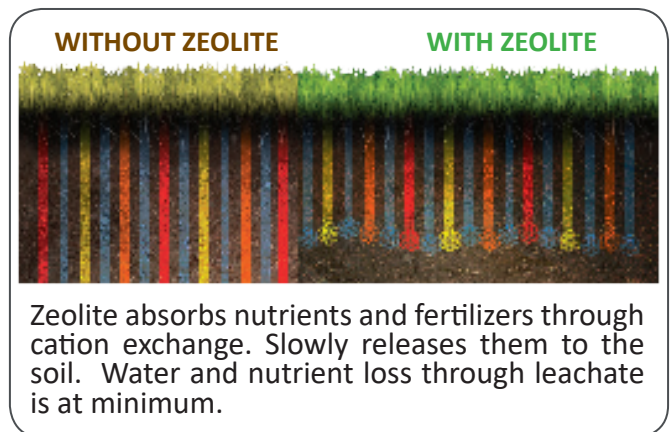

THE ADVANTAGES OF ZEOLITE OVER OTHER CONDITIONERS

- Improves the soil quality. Decontaminates the soil.
- Excellent hardness. Stable in soil.
- Economic and effective for many years.
- Improves the efficiency of fertilizers. Reduces fertilizer costs.
- Easy application, storage and transportation.
- Produced by the zeolite leader in Turkey, under the Fami-Qs quality control system, from the worlds' purest zeolite mineral with Ecocert certificate.
- Completely safe and toxic-free. There is no risk or danger of over-dosage.
- Prevents groundwater contamination that otherwise occurs in the absence of zeolite, due to fertilizers and other nutrients that are applied to the soil.

FOR BEST RESULTS!

Since Zeolite acts as a reservoir for water and plant nutrients, best results are obtained if charged with fertilizers before or soon after mixing it with soil.

Contact us for our references.

Zeolite absorbs nutrients and fertilizers through cation exchange. Slowly releases them to the soil. Water and nutrient loss through leachate is at minimum.

**SUSTAINABLE AND COST EFFECTIVE
SAVE WATER & NUTRIENTS**

ZEOLITE CLINOPTILOLITE

CONTENT

Zeolite is a crystalline, hydrated aluminosilicate that has an infinite three dimensional structure. Zeolite contains extremely pure Clinoptilolite (92% by mass on average), which is one of the most effective Heulandite type of zeolite. Its highly porous structure (with a porosity reaching 50%) provides an extremely large surface area on which chemical reactions and cation exchanges can take place at a very high degree. It can absorb incredible amounts of water/liquid into its pores. Clinoptilolite has a natural negative ion charge which furnishes it with a tremendously high cation exchange capacity (CEC). Thanks to CEC, it adsorbs and binds ammonium, toxins, mycotoxins and heavy metals like Ni, Pb, Hg and Cd, very efficiently and effectively.

CATION EXCHANGE CAPACITY

Cation exchange capacity (CEC) is a measure of the amount of cations (positively-charged ions) that a clay can catch. As mycotoxins, toxins, heavy metals and ammonium are all positively charged, they are all easily trapped by cation exchangers.

3

GRASS CONDITIONER

APPLICATION

New Lawn / Green Construction: Mix zeolite with soil at 20 % inclusion rate by volume. Lay the mixture at a height of 15 - 30 cm at the application area.

Lawn / Green Regeneration: Apply 5 - 10 kg of zeolite per sqm of land at a depth of 8-15 cm, with a cultivator.

Aeration: Apply 1 - 5 kg of zeolite per sqm of lawn / green during aeration.

Stable Barrier Layer: Place coarse zeolite at 15 - 30 cm of height at the very bottom layer of the land. Lay soil & fine zeolite mixture on top of it.

SUITABLE SIZES

0,7 - 1,6 mm (approved size)

1,6 - 3 mm

3 - 5 mm

THE PRODUCT

100% natural & safe product. Certified by Ecocert for use in organic farming. Produced in accordance with the EU's Feed Additive and Premixes directive and under the strict quality control system and surveillance of Fami-Qs. Contact us for our references.
